

WEEK 4:

Name	Report
Alban PUECH	Worked on the data structure to plot the momentum as a function of time + debug of momentum strategy. What I have to do : learn more about qt plot + work on class for strategy
Maxime LAMY	Created a basic sign up page and came up with ideas to improve it at a later stage. Looking at programming a suggestions search.
Vinh NGUYEN	Created a layout for stock displaying. Will look more at QtDesigner to manage sizing.
Maayane ATTIAS	I worked on the Strategy class with the ML team. We agreed on the data members and function to implement. This week: -Finish the calculate_signals and simulate functions - Write a main function to test the Strategy class
Frédéric Marcel TCHOULI	Began implementation of the Strategy Class with other ML team members.
Mehdi Makni	What I did: Create a helper document that contains functions to manipulate QJsonObject. Discuss implementation of news class with other teams. What I will do: Finish the news class.
Mira HAJAR	Got introduced to Qt GUI platform (watched videos and read about it) to be able to start concretely helping the GUI team
Vishrut Malik	Committed the momentum strategy devoid of any bugs along with its plot of output and helped ideate the structure of momentum base class.
Mamoune Mouchtaki	-Create a design of the homepage and propose it to the team. -Begin the code of this one.
Khanh Nguyen	Designed “new trade order” page. Connected it to mainwindow.

Watchlist

Tickers to be added to watchlist (please ensure they are accurate, for example do not input AAPL but AAPL.OQ). Separate tickers by a comma.

Worked further on the basic sign up page done by maxime to make it responsive, good looking and connected its slots and signals

Rayen Ayari

Learned how to plot graphs in Qt and used data from API to plot them.
